***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-5,7-12 and 14-16 and 23 are rejected under 35 U.S.C. 112, first paragraph, because the specification does not reasonably provide enablement for the broader scope in claim 1. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

Applicants' comments have been noted and considered but are not deemed persuasive of patentability. While the amendments to the claims overcome the rejection with respect to the definitions of cycloheteroalkyl and heteroaryl, the compounds containing the cyclized substituents, the compounds noted above are not enabled.

A review of the specification shows no use or actual working examples employing these compounds. The assay on pages 164-165 of the specification recites a technique but provides not data that it is applicable to the claimed compounds or provides a use for the claimed compounds.

The limited data provides no clear evaluation of how the remaining scope might affect potency to a large or small degree.

There is thus no reasonable basis for assuming that the myriad of compounds embraced by the claims will all share the same physiological properties since they are so structurally dissimilar as to be chemically non-equivalent. Note *In re Surrey* 151 USPQ 724 regarding sufficiency of disclosure for a Markush group. Also see MPEP 2164.03 for enablement requirements in cases directed to structure- sensitive arts such as the pharmaceutical art. Also note the criteria for enablement as set out in *In re Wands* cited in MPEP 2164.01(a), August 2000 edition. Thus given the breadth of the claims, the level of unpredictability in the art and the lack of direction (i.e. working examples) provided as to what other ring systems might work this rejection is applied.

No claim is allowed.
